# All Clear™

**HSNO Class: 8.2B, 8.3A**

**HEALTH WARNING: DANGER** This product may cause skin burns and eye damage

**PRODUCT DISPOSAL:** Ensure unwanted product is used by another operator strictly in accordance with label directions. Do not allow product to enter waterways, drains or sewers.

**CONTAINER DISPOSAL:** Ensure container is completely empty. Burn if permitted and circumstances, especially wind direction allow, otherwise bury in landfill.

**HANDLING PRECAUTIONS:** When mixing or applying, wear protective clothing, gloves and goggles. Do not eat or drink while using. Wash hands and face before meals and after work. Wash protective clothing after work.

**STORAGE:** Store in original container tightly closed and in a locked, dry, cool, well ventilated area, away from feed, seeds and foodstuffs. Storage must be generally in accordance with NZS8409 Management of Agrichemicals. See the HAZNOTE for further information.

**FIRST AID:** If swallowed do NOT induce vomiting. For advice, contact the National Poisons Centre **0800 POISON (0800 764 766)** or a doctor immediately. If skin, hair or eye contact occurs, remove contaminated clothing and flush skin, hair and/or eyes with running water for several minutes.

### DIRECTIONS FOR USE GENERAL INFORMATION

**ALL CLEAR** removes traces of agricultural chemicals left on and in spraying equipment, including sulfonylureas, phenoxy and carfentrazone-ethyl. **ALL CLEAR** can be used to decontaminate tanks and equipment at any time, but should always be used when changing from one herbicide chemical group to another, switching from herbicides to fungicides and insecticides, and at the end of season sprayer clean-up.

### USE RATE

<b>Decontamination and removal of residues of sulfonylurea herbicides and carfentrazone-ethyl herbicides, combinations or sticky formulations:</b>	<b>Use 500 mL per 100 L of water.</b>
<b>General Purpose Cleaning:</b>	<b>Use 250 mL in 100L of water</b>

### DECONTAMINATION PROCEDURE

1. Immediately after spraying, drain tank, hoses and booms completely. Any contamination on the outside of spraying equipment should be removed by washing down with a fresh solution of **ALL CLEAR** and water (50 mL in 10 L of water).
2. Rinse inside of tank clear of visible residues with clean water and flush through hoses and booms using at least 1/10 of tank spray volume. Drain tank completely.
3. Half fill the tank with clean water and add **ALL CLEAR** at the recommended rate per 100 L of water to the total volume of the tank. Agitate and briefly flush the hoses and booms until the cleaning solution starts to come out through all the nozzles. Then completely fill tank with water and allow to stand for 15 minutes with agitation running. Again flush the hoses and spray all of the solution out through the booms and drain the tank completely.  
**NOTE:** For extra "sticky" combinations such as carfentrazone-ethyl plus glyphosate allow the cleaning solution to "sit" for 24 hours to increase residue removal. If it is suspected that hoses and spray lines are contaminated, increase cleaning solution contact time to 48 hours. Replace old and perished hoses.
4. Nozzles, screens and filters should be cleaned with a fresh solution of **ALL CLEAR** and water (50 mL in 10 L of water).
5. Rinse the tank with clean water and flush through the hoses and booms. Drain the tank completely.
6. Spray the rinsate on a crop approved for the product/s being removed from the spray tank.
7. A susceptible plant should be treated with a sample of the rinsate to determine whether residues remain.
